## CAREER HIGHLIGHTS & ACCOMPLISHMENTS

---

### ABRADO INC. 2012-2016

In 2012 following the expiration of a 3 year Non-Compete with EXPRO I signed a 4-year contractual agreement with Abrado Wellbore Services to lead the development and operations of a new downhole QAM Telemetry Imaging manufacturing & service business which was successfully completed in March of 2016.

During this project my team and I designed, built, tested and deployed the industry's leading, state of the art Oil and Gas well downhole camera systems. We began initial commercial service operations in the U.S. with the new systems in 2014 and within the first 18 months completed more than 100 successful commercial jobs including Deepwater Offshore projects for more than 25 customers including: ExxonMobil, Chevron, ConocoPhillips Hess and Anadarko.

### DHV INTERNATIONAL, INC. / THE EXPRO GROUP - U.K. 1987-2009

After working 9 years for Eastman Whipstock, the world's largest Directional Drilling & Sub-Surface Survey Company (Now Baker Inteq) where I was serving as a New Technology Product Line Champion and PSL Manager I was recruited by the President of that company (Matt Riordan) to Manage a New Technology Startup (DHV International – DHVI). I resigned my position at Eastman and joined the new company during the early stages of development, assisted and managed the R&D effort becoming a **patented inventor** during the process.

As Vice President & General Manager of DHVI I prepared a commercialization business plan for the Board of Directors, negotiated global contracts with Halliburton and built the company into a successful, growing multi-national organization. Along the way I co-authored several technical papers, became a **published author and global lecturer by the Society of Petroleum Engineers (SPE), and in 1995 I was installed as DHVI's President and CEO.**

I introduced our Board to the Investment Bankers at Simmons & Company of Houston and with their assistance **lead the company through the successful sale to the Expro Group, a publicly traded U.K. Oilfield Service company.**

At the closing I was installed by Expro as President of DHVI. During the initial two years we continued to grow the global business for Expro as a Small Business Unit at an annualized rate > 50%. I continued to assist with the integration of DHV and in 2007 the decision was made to regionalize the business. I was asked to relocate to Aberdeen, Scotland as the Global Director of Cased Hole Services but elected to accept a Houston position as the Western Hemisphere Vice President of Cased Hole Services.

In that position I had product line oversight of **three Global Manufacturing Units, DHV, Kinley, & SmartTrac** as well as the related services which included: E-Line, Slickline, Fiber Optic Logging Units, Cased Hole Logging including: Camera Services, Kinley & Sondex Caliper Services, Kinley Power Tools, Sondex PL & Casing Evaluation Tools, Pressure Transient Testing, TCP, Escape (Casing Conveyed Perforating) and Wireless Well Monitoring services. My office was located in Houston Texas. I completed my contractual commitment to Expro on May 1, 2009.
